BERETTA

Beretta turns on the lights

Since 1948 the cables that make sure your bicycles brake, provide support to the strollers of your children, and allow your cars to run have had a name. A name that perhaps the consumer public doesn't know, but that for many companies represents a precious partner, able to meet their needs and solve their problems.

It's **Beretta**, the company that for seventy years has designed and manufactured bowden cables, steel cables, flexible transmissions, metallic sheaths and push-pull systems. Year after year, thanks to its manufacturing expertise and cutting-edge technology, the company has been able to win the confidence of an increasing number of clients, growing to become the Italian leader in its sector. Beretta now supplies its cables to numerous companies in a wide variety of sectors: automotive, aeronautic, healthcare, gardening, early childhood, earth-moving machinery.

And then, **lighting.**
The experience gained led Beretta to also expand its business to the production of cables and components for lighting systems: alongside a broad range of standard products, the company offers special tailor-made components, designed in collaboration with its clients. And it's precisely this close-knit relationship between the company and its customers, the ability to design side by side the most suitable solutions and to respond promptly to requests, which represents Beretta's real competitive edge.

Functionality and design. Quality and aesthetics. Safety in suspension and beauty in components. Beretta cables are a sign of care for your products and your customers.

Services and processes

Design and co-design

The added value of Beretta is already apparent at the start up stage: we have developed our greatest synergies with our clients when we have been allowed to contribute to the initial product concept.
Our technicians work alongside the client contributing their precision and expertise to work on the project as co-designers.

Logistics

For Beretta, logistics means being able to have the right product arrive in the right quantities, packaged right, at the right time and right price.
Beretta has invested time and resources in this kind of logistics. Today, this is all part of Beretta's know-how - and our customers know it.

Zamak die casting

Zamak die casting is the standard technology used by Beretta for nipples on metal cables.
Together with the precision and total reliability of the cable manufacturing, this technology ensures optimum performance in our finished products.

Services and processes

Design, project development, industrialization, manufacture and logistics are services Beretta is ideally qualified to offer.

Plastic injection moulding and overmoulding

Since 2002 Beretta has acquired skills and resources in the area of plastic injection moulding applied to particular high end techniques: both moulding of individual components as well overmoulding on casings and metal cables. These are now routine processes in continual evolution.

Laboratory Tests

In recent years, Beretta has made considerable investments in its laboratories.
Currently, our laboratory is equipped with cutting edge equipment for carrying out all the major tests on our products: durability and efficiency tests, traction tests, durometer tests, fatigue tests, corrosion tests, thermal cycles, etc.
We have external laboratories to carry out particular tests to cover the requests which come from more specialist industries.
